

Floating lid (polypropylene spheres)

Clifton Food Range[®] polypropylene spheres provide a floating lid which reduces evaporation and improves stability when the standard 'lift off lid' is not being used.

The spheres are manufactured from polypropylene which is non toxic and can be safely used continuously up to 110 °C.

A single layer of spheres covers 91% of the surface area trapping air in the gaps which adds to the thermal insulation properties.

Bags can be easily lifted out of the bath 'through' the lid.

The spheres are ideal for use with the FL4CA digital immersion circulator when cooking for extended periods of time.

General

Product reference: BP0368F
Available in packs of 200:

Number of packs per bath:

FL04D ~ 1 pack
FL08D ~ 2 packs
FL14D ~ 2 packs
